Search systems that perform. Teams that can own them.

38%

lower p95 search latency

4

engineers mentored to ownership

3

teams using the handover playbook

EXPERIENCE

Senior software engineer

2022 — Present

Northstar Search

- Led the search-ranking rebuild from prototype to production, reducing p95 query latency by 38% while carrying the system through a staged rollout.
- Built the evaluation workflow used to review relevance changes before release, giving the team a shared way to assess a ranking change.
- Mentored four engineers through design reviews, rollout and independent system ownership; made the handover part of the engineering work.

Software engineer

2019 — 2022

Fieldwork Labs

- Worked directly with support teams to design an operations workspace, bringing a fragmented five-tool process into one place to find the next action.
- Turned scattered handover notes into a shared playbook adopted by three product teams, connecting technical context with day-to-day operating decisions.
